

## DOCUMENTING IN A CARE ENVIRONMENT

When you're writing care notes use the following formula to make sure you capture the information you need:

### PROGRESS NOTES

Progress notes which are a form of continuity documentation are also known as:

- Exception notes
- Daily records
- Care records
- Care logs

### PIE

- P PROBLEM:** What is happening? What problem has been identified or what is the issue?
- I Intervention:** Record what you did to address the problem.
- E Evaluation:** What was the outcome of your intervention? What happened?

Remember when you're writing your progress notes that they have to be accurate and factual, so only record what you saw or heard.
